Skills

Design

End-to-end product design

Information architecture

Interaction design

UI & visual design

Design systems & components

Prototyping

Wireframing & sketching

User research & usability testing

A/B testing & experimentation

Human-centered design

Data-driven insights

Data visualization

Human-computer interaction

Accessibility (WCAG)

Agentic AI

Tools

Figma, ProtoPie, Framer, Miro, Notion, Adobe CC

AI tools

Figma Make, Claude Design, Google Stitch, Claude Code, Codex

Development

HTML, CSS, Python

Languages

Polish (native), English (fluent)

Honours

DTU Green Challenge

0-to-1 mobile app (Android) to reduce food waste, shipped in **8 weeks** and selected to present in front of investors

DTU Finalist X-Tech Entrepreneurship

AI-driven startup, awarded one week of workshops in Silicon Valley (Nvidia, Plug & Play offices), UC Berkeley and Stanford

Interaction 2024, Tokyo

AI-copilot storytelling for children, conference paper selected

Interests

Photography, travel filmmaking, solo backpacking

Product Designer with **5 years** of experience taking commercial and technical systems end-to-end, from ambiguous problem to shipped products with business impact, across responsive web, desktop and mobile. My strength is thinking through complexity and ambiguity, built across two roles designing data-dense dashboards and complex web interfaces. I bring clarity by owning the full process, human-centered and collaborative, with an eye on customer experience, product strategy and the technical side of what I design.

Experience

UX Designer | Nacos Marine (formerly Wärtsilä)

Jan 2023 – Dec 2025 · Copenhagen

- Led and shipped end-to-end UX design and product strategy for new vessel monitoring interfaces (web, desktop and HMI) used in maritime logistics operations, translating complex technical constraints into intuitive and accessible systems that build user trust under high pressure. Delivered across international markets to **13 000+ ships** globally, supporting **30k+ daily active users**.
- Cut navigation depth from **4-5 levels of nested menus to 2** and consolidated **22 functions into 10** by restructuring the information architecture of the system, reducing operators' reliance on the manual for core tasks.
- Cut time-to-task execution by **70%** by transforming high-volume data into high-impact dashboards and monitoring panels handling **70+ active data points** per single page.
- Reduced development uncertainty by framing and validating hypotheses early: led discovery interviews and usability testing across enterprise and consumer products, and facilitated iterative co-creation workshops that aligned stakeholders on problem framing and solution direction.
- Increased engineer productivity by architecting user-centric (HCI) workflow improvements and reusable design system components across the legacy interfaces.
- Lowered time-to-critical decision and cognitive load by collaborating cross-functionally with product owners, engineers and developers from different countries to define customer needs and product strategy.
- Won repeat business, a customer ordering a second interface after a successful release, by designing novel end-to-end patterns for vessel navigation that strengthened the customer experience (CX) and held the brand identity, and presenting the work directly to major customers.

UX/UI Designer | Cytiva

May 2021 – Jan 2023 · Krakow

- Cut daily task-completion time by **30%** for **500+ employees** by leading the redesign of the internal hour-tracking system.
- Designed, co-developed and delivered a new end-to-end B2B SaaS customer-ordering tool across desktop.
- Simplified equipment ordering for sourcing specialists by redesigning procurement data dashboards, informed by qualitative user research.
- Helped maintain a design system with other designers.
- Partnered with business analysts, developers and project managers, co-designed the company's internal employee website and presented work to customers.

Education

MSc Human-Centered Artificial Intelligence | Technical University of Denmark

Aug 2022 – Mar 2025

Human-centered design, data visualization, accessibility, interaction design, ML foundations.

Thesis: a dashboard using data from a wearable button to improve treatment for patients with mental health disorders.

MEng Applied Computer Science | AGH University of Science and Technology

Feb 2021 – Aug 2022

Software engineering, HCI, front-end development. Thesis: ticket platform redesign for **1000+ students**.

Member of BEST AGH Krakow. Coordinated the design team for a Europe-wide conference of **400+ attendees** and grew local recruitment applicants by **15%**.

Exchange student | University of Tokyo · NOVA University of Lisbon

2023/2024 · 2022

HCI, sense of agency.
